Discussion Points for Meta Analysis

- Joseph 2000:

    - Book chapter from:

        `http://www.medicine.mcgill.ca/epidemiology/Joseph/`
        `courses/EPIB-621/rosenberg.joseph.barkun.pdf`

    - Covers basics of meta-analysis from both frequentist and Bayesian viewpoints.

    - Covers both fixed and random effects models

- Carlin 1992: Classic reference for Bayesian meta-analysis, upon which the WinBUGS blocker meta-analysis example is based.

- Smith and Speigelhalter 1994: Book chapter covering very similar material to Carlin 1992.

- Brophy 2003: Bayesian meta-analysis covering the possibility of adjusting for possible bias in some of the studies.

- WinBUGS blocker example: Basic WinBUGS meta-analysis model following the methods of Carlin 1992. We will use and extend this model to other situations in the assignment.
